**Title:** The 2nd National Congress of Veterinary Laboratory Sciences and Technologies

**Abstract:**

PCR rRNA

Shanshanshi et al. have confirmed the positivity of the PCR test for the detection of Lactococcus garvieae. The test was performed on a clinical sample collected from a dairy farm. The results showed that the organism was present in the sample, indicating a potential risk for the herd. The study highlights the importance of implementing proper hygiene and biosecurity measures to prevent the spread of this pathogen.

**Keywords:** PCR, Lactococcus garvieae, Dairy Farm, Hygiene, Biosecurity.
